Compiled successfully!

You can now view **card** in the browser.

  Local: http://localhost:3000
  On Your Network: http://192.168.1.10:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled **successfully**

approach:

1. **initially taking an array of objects like below**

```
const cards = [
  {
    url:image1,
    title:"Audi R8",
    description:"The definition of a supercar describes an expensive car that's flashy,"
  },
  {
    url:image2,
    title:"Maserati MC20",
    description:"The definition of a supercar describes an expensive car that's flashy"
  },
  {
    url:image3,
    title:"Porsche 911 GT3 RS",
    description:"The definition of a supercar describes an expensive car that's flashy"
  },
  {
    url:image4,
    title:"Lamborghini Huracan Tecnica",
    description:"The definition of a supercar describes an expensive car that's flashy"
  },
  {
    url:image5,
    title:"Rimac Nevera",
    description:"The definition of a supercar describes an expensive car that's flashy"
  },
  {
    url:image6,
    title:"ferrari F9",
    description:"The definition of a supercar describes an expensive car that's flashy"
  },
]
```

1 . **Passing this card array to child (card component) of App component by using props.**

2 . **getting data as argument like {card} in card component.**

3 . **in card component i use one state [show, set Show] to get extra info as description.**

4 . When we click the button then show becomes true by assigning set Show (! show).
